DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

The references cited on PTO 1449 have been considered.

Claim Objection

Claim 12 is objected to in that -- F1 (m) is a filtration accuracy of the first filter,-- should be inserted after "where" at line 4 for clearer language. Correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 10 and 16 are rejected under 35 USC 102 (b) as being anticipated by Sugimoto et al (US 5,565,899).

Sugimoto et al discloses in Figures 20-22 an ink jet recording apparatus comprising:

- an ink storage section (1100 or 1000) for storing ink therein;
- an ink supplying path (1600a) for supplying the ink stored in the ink storage section to a print head (400a);

Art Unit: 2861

- an electrode (700b) for detecting whether the ink is present or absent in the ink supplying path (1600a) (column 21, lines 50-56);

- first and second filters (700, 700a) in the ink supplying path (1600a), the first and second filters having different filtration accuracies, the first filter (700a) located upstream to the second filter
- (700), the second filter (700) has a larger filtration accuracy than the first filter (700a); and
- an amount of the ink supplied into the ink supplying path being .08cc (column 19, lines 17-18);
- the filter has a mesh shape (column 19, line 35).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior arts are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-3, and 13-14 are rejected under 35 USC 103 (a) as being unpatentable over Sugimoto et al (US 5,565,899) in view of Nagasaki et al. (US Pat. 6,036,305).

Sugimoto et al. disclose the basic features of the claimed invention were stated above but do not disclose a filter in the ink supplying path having a water-repelling property and an amount of the ink supplied into the ink supplying path being 1.0cc.

Nagasaki et al. teach in Figures 9-11 an ink cartridge comprising a filter (64) in the ink supplying path (63) having a water-repelling property (column 9, lines 14-15).

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to incorporate the teaching of Nagasaki et al. in the Sugimoto et al. ink jet apparatus for the purpose of facilitating the removal of air bubbles from a filter at a minimum level (column 10, lines 1-5).

Art Unit: 2861

It is noted that the recitation "an amount of the ink supplied into the ink supplying path being 1.0cc." instead of "an amount of the ink supplied into the ink supplying path being .08cc" as recited in the Sugimoto et al. reference" is a design expedient for one of ordinary skill in the art for the purpose of controlling ink flow rate at the ink supplying path. Also, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable range involves only routine skill in the art. *In re Aller*, 105 USPQ 233

Allowable Subject Matter

Claims 4 and 15 would be allowable if rewritten to include all of the limitations of the base claim and any intervening claims. This claim would be allowable because none of the prior art references of record discloses an image forming apparatus satisfying:

$$n.N.R.B > 2.\gamma.h$$

where n (N/m) is a surface tension of the ink, N(cells/m) is a cell density of the ink absorbing body before contained in the ink storage section, R is a compression ratio that is a ratio between a volume of the ink absorbing body after contained in the ink storage section, and a volume of the ink absorbing body before contained in the ink storage section, γ is a specific gravity of the ink, h (m) is a maximum water head of the ink in a perpendicular direction with respect to an ink supply outlet of the ink storage section under arbitrary orientation, and B is a coefficient = 4.08 x 10^{-4} in the combination as claimed.

A~

Claims 5-9 are allowable. These claims would be allowable because none of the prior art references of record discloses an image forming apparatus satisfying:

$$(4.Q/(\pi d))/v \le 2,$$

PV av

where $v(m^2/s)$ is a dynamic viscosity of the ink, d(m) is a diameter of the ink supplying path, $Q(m^3/s)$ is an average ink supply amount.

Application/Control Number: 10/766,777 Page 5

Art Unit: 2861

Claim 11 would be allowable if rewritten to include all of the limitations of the base claim and any intervening claims. This claim would be allowable because none of the prior art references of record discloses an image forming apparatus satisfying:

$$F1 < F2 \le V2F1$$
,

where F1(m) is a filtration accuracy of the first filter, and F2(m) is a filtration accuracy of the second filter in the combination as claimed.

Claim 12 would be allowable if rewritten to include all of the limitations of the base claim and any intervening claims. This claim would be allowable because none of the prior art references of record discloses an image forming apparatus satisfying:

$$F1 < F2 \le DB$$
,

where F1(m) is a filtration accuracy of the first filter, and F2(m) is a filtration accuracy of the second filter, and DB(m) is a diameter of an air bubble created when an air bubble created in the ink supplying path passes through the first filter in the combination as claimed.

CONCLUSION

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Anh Vo whose telephone number is (571) 272-2262. The examiner can normally be reached on Tuesday to Friday from 9:00 A.M.to 7:00 P.M..

The fax number of this Group 2861 is (571) 273-8300.
